Beverley interprets the bivalve shell at the right in the engraving as 'a Cockle shell, which they sometimes use instead of a spoon'; but he also describes the usual spoons as very large (cf. the commentary on no. 48), and the individuals here are eating with their fingers. 1 It seems more probable that the shell is intended to indicate that shellfish were among the common Indian foods, along with the maize, walnuts, 3 and fish shown nearby. However, it should be noted that shell spoons were not uncommon in North America, and are mentioned for the Delaware. 3

The tobacco pipe in the engraving is an accurate representation of the obtuse angle elbow-pipe, well known archaeologically from the Carolinas and Virginia, usually of clay but sometimes of stone (chlorite). 1 The type was introduced by the Roanoake colonists to England, and imitated there. 3 An example of red clay has been excavated from the ditch at the Roanoake fort, where it was probably lost by the colonists of 1585-6 (see fig. 2). The form drawn is close to this Roanoake specimen, but it can be matched even more precisely by other archaeological specimens from neighbouring regions. The illustration shows that here, at least, this type of pipe was smoked without a separate wood or cane stem.

The man is wearing one of several types of ear ornament shown by White; other, less clear, indications of this type are in nos. 45 and 49. There was a great variety of men's ear ornaments in this general region; although this specific type seems to be otherwise undocumented, it is not outside the range of variation reported. 7

The sitting posture shown in the water-colour 8 is one of the indications of accuracy of White's observations:

45. INDIAN PRIEST

A. DRAWING BY JOHN WHITE

The drawing shows an elderly man facing half-right, his right foot placed slightly in front of his left, wearing a short cloak which covers his left shoulder and arm. It is tied with a string on the right shoulder leaving the right arm bare. It reaches barely to the thighs and is made of narrow strips of light brown fur, with hem and neckband probably of reversed skin. His right hand is raised and points downwards with the index finger. There is a suggestion of veins (or body painting?) on the right forearm. His hair is shaved close at the sides leaving a stiff roach from the forehead to the nape of the neck and also a fringe projecting from his forehead. A few wisps of facial hair can be seen on his chin and upper lip. Some of the wrinkles on the face would appear to have been emphasized with red paint. He is wearing an ornament consisting of a strip of skin threaded through the lobe of the ear, tied below the ear and marked at each end with a grey streak, probably representing a bone or shell bead.

Black, various shades of brown, grey and pinkish watercolours, heightened with white (partly oxidized), over black lead outlines; 20.2 x 15.1 cm. or 104 x 58 in.

Inscribed in dark brown ink, at the top, One of their Religious men.

1906-5-9-1 (14), L.B. 1 (15), C-M. & H. 42.

Literature: Quinn, pp. 430-1, no. 44 (a); Croft-Murray & Hulton, p. 43, no. 44, pl. 33.

OFFSET

The drawing has been transferred clearly but lightly and fairly evenly. The white strokes at the knees, front and back, have offset in an oxidized form.

P. & D., 199 a.2, L.B. 2 (15).
